Medical Grade UHMW-PE for Long-term Implantation

Quadrant’s MediTECH® division is dedicated to serving the global orthopaedic implant market.

PRODUCTS WITH PROVEN SUCCESS
For more than 30 years, Quadrant MediTECH has supplied leading orthopaedic implant manufacturers with premium grade UHMW-PE under the Chirulen® and Extrulen™ brand names. Due to their superior physical and mechanical properties, cleanliness and consistency, Chirulen and Extrulen have become the materials of choice for articulating surfaces, helping restore a higher quality of life to millions of patients worldwide.

QUALITY FROM START TO FINISH
Superior products begin with superior raw materials. MediTECH uses GUR® Premium resins from Ticona, specified for use in surgical orthopaedic implant applications. This highly pure resin complies with standards ASTM F648, ISO 5834-1 and ISO 5834-2, and exhibits excellent bio-compatibility with skin, blood and tissue. We have instituted a series of tests and implemented quality control measures to produce materials that far exceed ASTM F648 and ISO 5834 requirements.

TECHNOLOGY FOR TODAY AND TOMORROW
MediTECH invests heavily in advanced technology research, as well as new process and product development. Our focus on incremental improvement and break-through innovation helps bring continuously improving products and services to you.
Our state-of-the-art polymer research, analysis and testing lab – one of only a handful worldwide – provides you immediate access to testing equipment and lab staff who have more than 30 years of expertise to work closely with your R&D team.
The first to adapt inert annealing techniques for UHMW-PE in this market, MediTECH’s expertise in thermal stress relieving and other post-sintering processes make Chirulen and Extrulen easier to machine to exacting tolerances.

GLOBAL FACILITIES, SERVICE & SUPPORT
With manufacturing, distribution and sales facilities in the U.S., Germany, U.K., France, Japan and China, MediTECH is uniquely positioned to meet your implant material needs. Our dedicated team enables worldwide coordination while our multinational locations allow us to be responsive on a local level: local contacts, local supply, local language, local time zones and local service, all of which make it easier for you to do business with us.
Chirulen® UHMW-PE Premium Grade with Vitamin E
Sterilization and cross-linking by irradiation bear the risk of free radicals formed in the UHMW-PE which can result in in vivo oxidation and material degradation. Vitamin E known as an antioxidant has positive influence on this process and is used as a stabilizer for orthopaedic implants made from UHMW-PE.

Quadrant EPP provides Chirulen and Extrulen shapes with Vitamin E as per customers’ requirements. Tests have proven unaffected biocompatibility of medical grade UHMW-PE blended with Vitamin E as well as shown mechanical properties to remain practically unchanged.

Expertise in Cross-Linking
Chirulen and Extrulen are the market leading products for use in today’s highly cross-linked Polyethylenes (XL-PEs) – with more than 10 years of clinical history and follow-up. Recent clinical results and studies demonstrate significant improvements achieved in wear reduction and further improvements are in constant development. Quadrant EPP dedicates a considerable portion of their R&D efforts and know-how to the development of customized XL-PEs, also in combination with Vitamin E and other antioxidants.
